

## Army of Nannies

# Connecting families with the perfect nanny

## Services

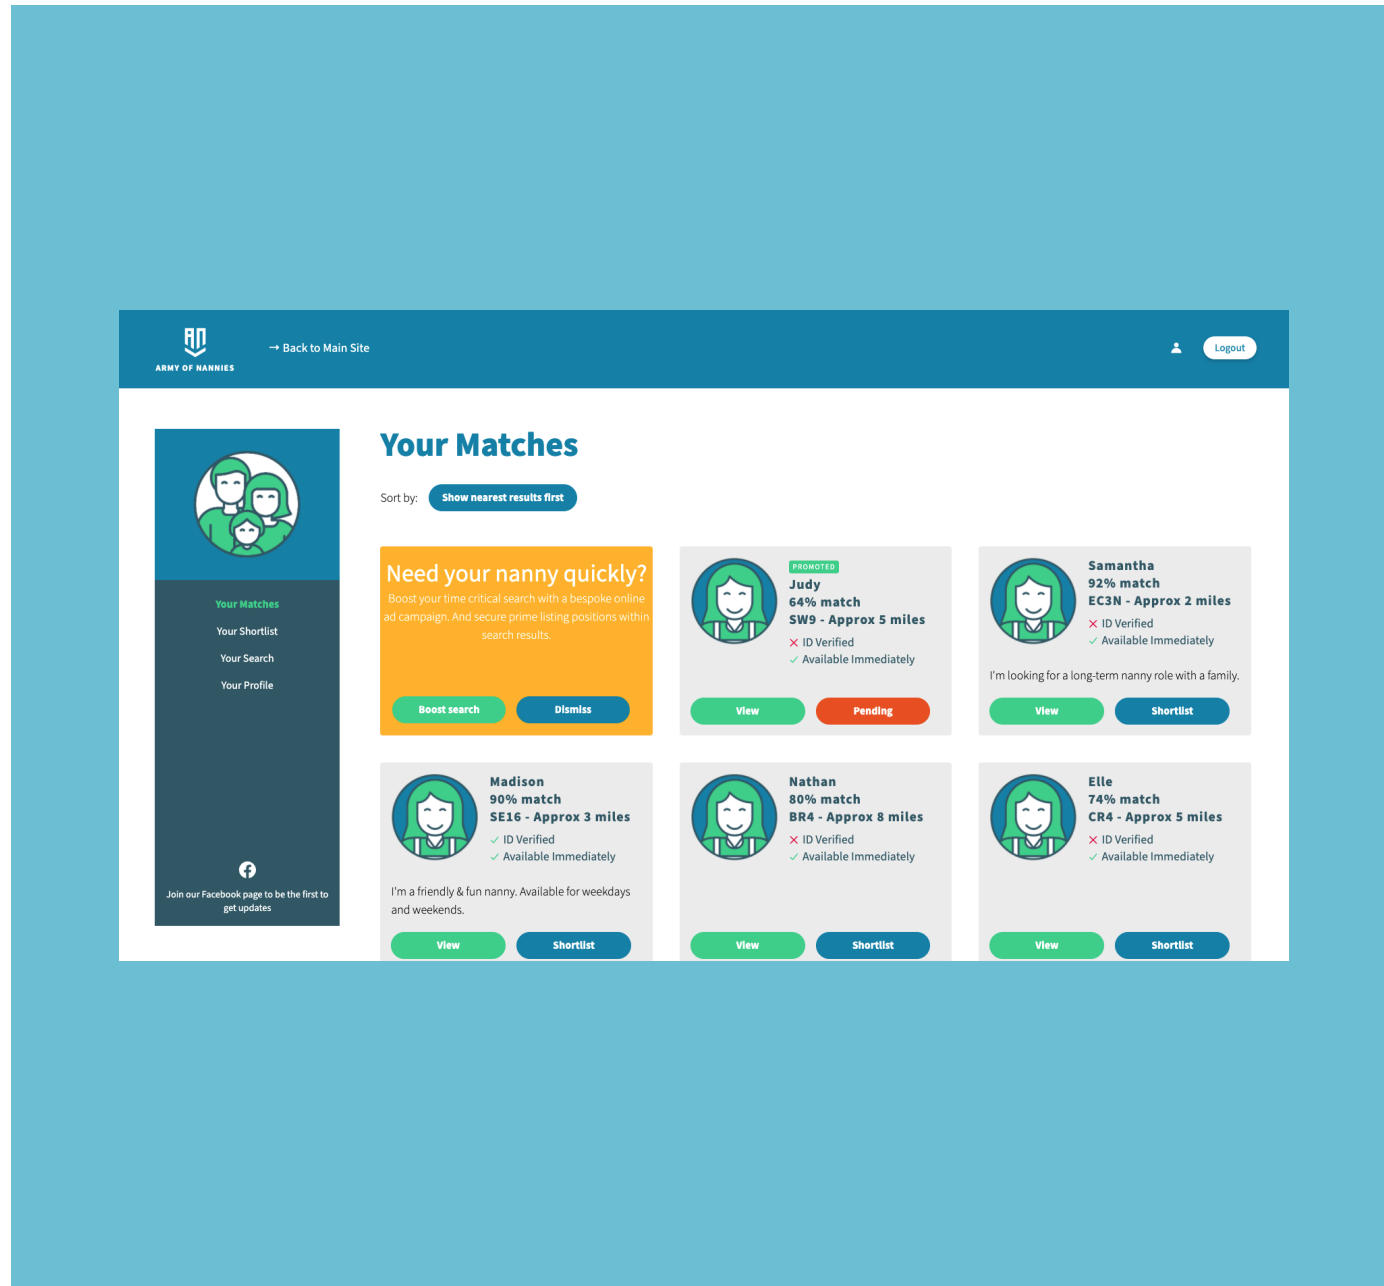

Consultation. Design. **Development. Maintenance.**

## Overview

Army of Nannies works to provide a bespoke matching service for families looking for a nanny to meet their individual needs and requirements.

The Army of Nannies team approached Steadfast Collective looking for further development on their existing web application and to branch out the search functionality behind the nanny matching so that it could be used to power further matching services.

Using Laravel, we have been able to build new functionality into the application such as browser alerts for shortlist invitations and introducing payments so the client can start making money from the platform.

## Goals

- The Army of Nannies team came to Steadfast Collective looking for a reliable development partner to maintain and grow the existing Army of Nannies platform, building in new features, functionality, and expanding the current product.

## Results

- Army of Nannies have been able to start making money from the monetisation we added to the platform.
- The platform has seen consistent growth and a strong rate of new signups following our involvement in the project.

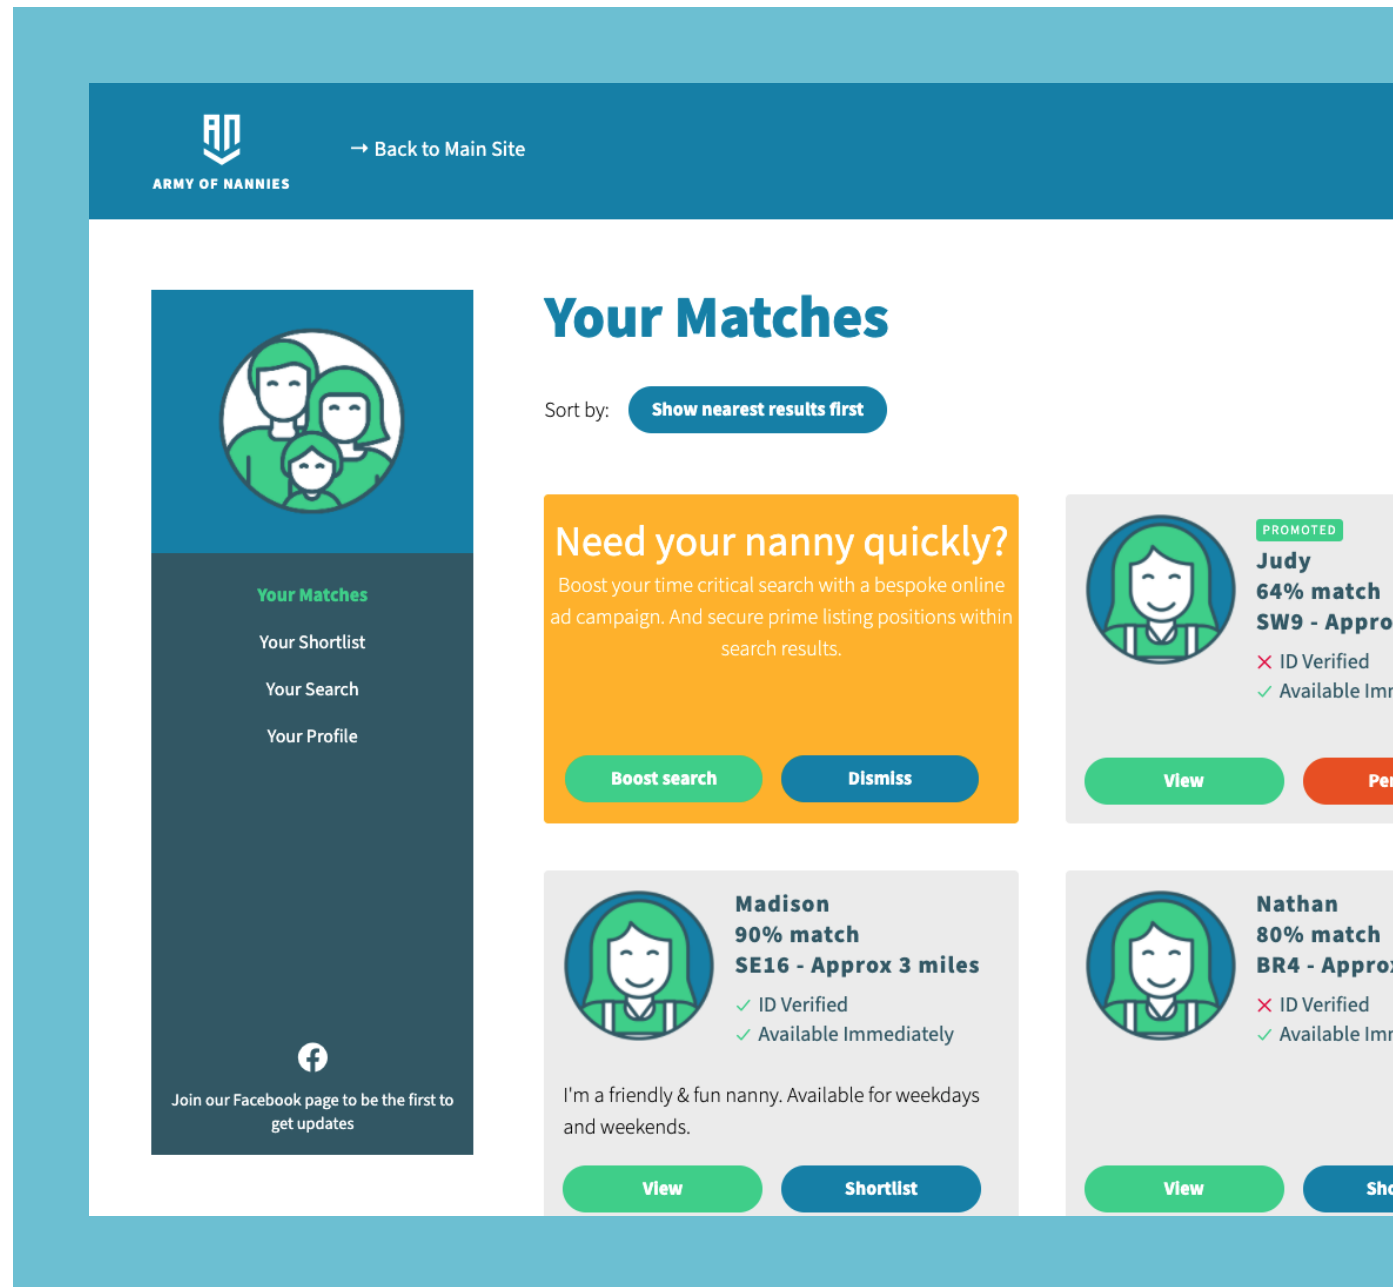

## Technical

Laravel, Vue.JS, Pusher, Stripe

We have had the great pleasure of working with Steadfast Collective for the last four months, and they have been a joy.

Steadfast are super-efficient, they have a 'make it work' mentality, and they're proactive. Our next venture has gone to the Steadfast without the need for a pitch.
